NH<sub>3</sub>/CO<sub>2</sub> cooling system

# NewTon

Forwarding to the future refrigeration systems

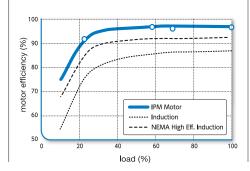

# Realizing more advanced economics and energy-saving

## The world's first introduction of semi-hermetic IPM motor to be mounted on ammonia screw compressor

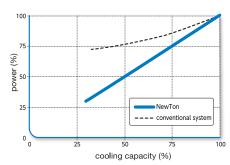

## Interior Permanent Magnet (IPM) motor

In order to improve the drive efficiency the system employs IPM motor, achieving higher efficiency by 5 to 10 % than conventional induction type.

## Revolution speed control by Variable Frequency Drive (VFD)

VFDs are used as driver to drive IPM motor. The rated revolution is set 4,500rpm (partially 5,600rpm) and continuously revolution speed control is equipped as a standard feature to correspond to part load operation. Driving at high speed and controlling revolution speed greatly contribute to energy-saving part load operation as compared to the conventional slide valve type.

#### **New Profile**

We developed a new profile for rotors with advanced machining technology enabling it to reduce internal leakage and achieve higher efficiency.

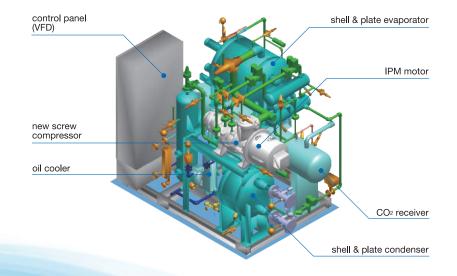

new rotors

## Adopted shell & plate type heat exchanger

We employed compact and high performance shell & plate heat exchangers on both condenser and evaporator to enable them to exchange heat even with a small differential temperature.

### Minimizing ammonia charge

Employing indirect cooling method enables ammonia to be contained only in a machine room, plus ammonia charge volume in this product 25kg to max. 75kg for each package.

#### Indirect cooling method utilizing carbon dioxide (CO<sub>2</sub>) characteristics

NewTon system can contain ammonia completely only in machine room so that it can achieve both energy-saving and safety.

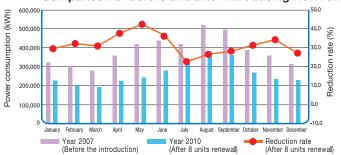

#### Over 30% energy-saving

1	capacity (ton)	after construction (year)	previous equipment refrigerant compressor		the number of NewTon units (unit)	Reducing rate of consumption electricity (%)
	18,000	29	HCFC-22	Screw	8	31.1

#### Comparison of before and after introducing NewTon

- $*{\it estimation from the power company bills} \\ *{\it all electricity including main machine, auxiliary machine, transporting machine, lighting and etc.}$
